

Industrial Centrifugal Pump for Fluid Transfer

This centrifugal pump is designed for fluid transfer applications. It features a volute casing and impeller, driven by an electric motor and mounted on a sturdy base.

Product Overview

Industrial Centrifugal Pump Series

This industrial centrifugal pump is engineered for high-efficiency fluid transfer across a diverse array of applications. The system utilizes a robust volute casing and a high-performance impeller, mounted on a stable base to minimize vibration and ensure operational longevity. Designed for professional use, this equipment supports various fluid handling needs, ranging from fresh water and chemical processing to oil transport and sewage management.

Pump Categories

Available Pump Types

- Fresh Water Centrifugal Pumps
- Chemical and Anticorrosive Pumps
- Oil and Process Pumps
- Trash and Slurry Pumps
- Well and Submersible Pumps

Technical Principles

Operating Principle

Radial flow centrifugal force combined with the lift of the impeller vanes.

Key Features

Construction Highlights

Volute Casing, Electric Motor Driven, Vibration-Dampening Base, Industrial Grade
