

Industrial Check Valve DN 40-600

This is an industrial check valve with a DN 40-600 specification. It is designed to prevent backflow in pipelines and complies with standards.

Product Overview

Industrial Check Valve Overview

This industrial check valve is engineered for reliable backflow prevention in demanding pipeline systems. Designed to meet strict Russian GOST standards, it features a robust construction suitable for a wide range of fluid applications. With versatile sizing options and flanged connections, this valve provides a secure and high-performance solution for professional industrial flow control requirements.
