

# Industrial Chemical Cleaning Tank for Air Coolers

This chemical cleaning tank is designed for cleaning air coolers used on ships and drilling platforms. Its compact structure allows for easy operation, with exterior interfaces configurable to match cabin-room pipeline requirements.

## Overview

### Industrial Cleaning Solution

This industrial chemical cleaning tank is specifically engineered for the maintenance of air coolers on ships and drilling platforms. Featuring a compact and robust design, it serves as the essential core component of a chemical cleaning system. The unit effectively circulates cleaning agents to remove filth and sundries, ensuring optimal performance of critical cooling equipment.

## Technical Specifications

### System Components

- Public base
- Tank body
- Circulation pump
- Inhalant filter
- Steam heating coil
- Electric control box
- Thermometer
- Pressure gauge
- Liquidometer

### Operational Features

Compact Structure • Easy Operation • Customizable Interfaces

### Applications

Marine, Offshore Drilling, Air Cooler Maintenance, Industrial Cleaning
