

Industrial Chemical Dosing System

This industrial dosing system is designed for precise chemical storage and controlled addition. It is composed of a series of interconnected vertical cylindrical tanks with fittings, gauges, and control elements.

Overview

Industrial Chemical Dosing System

This industrial chemical dosing system is designed for precise chemical storage and controlled addition in water and wastewater treatment processes. The robust assembly features a series of vertical cylindrical tanks interconnected by specialized piping and valves. Equipped with essential fittings, gauges, and control elements, it facilitates reliable continuous or batch processing for various industrial applications.

Technical Configuration

Key Components

- Vertical cylindrical storage tanks
- Integrated piping network
- Control valves
- Pressure gauges
- Precision dosing fittings

Primary Applications

Water Treatment, Wastewater Treatment, Chemical Storage, Industrial Processing

Operational Features

Process Capability

Continuous Process • Batch Process
