

Industrial Chemical Reactor Component

This is a component used in industrial chemical reactors. It features a metallic, ribbed section connected to a reddish-brown base, with a gray, circular component on top.

Product Overview

Industrial Chemical Reactor Component

This industrial chemical reactor component is engineered for robust performance in demanding chemical processing environments. Featuring a durable metallic, ribbed cap section designed for secure fastening, it ensures reliable sealing and operational integrity. The assembly includes a specialized adjustment knob, allowing for precise control and ease of handling during industrial operations.

Technical Construction

Material Finish

Metallic • Ribbed Design

Key Features

- Metallic lid/cap section
- Reddish-brown base assembly
- Integrated adjustment knob
- Industrial-grade construction

Fastening Mechanism

Concentric grooves for secure fastening

Application Suitability

Chemical Processing, Industrial Reactor Systems
