

Industrial Chemical Transport Piping

These pipes are designed for transporting chemicals and fluids in industrial settings. They are constructed from durable, chemically resistant materials and feature smooth inner surfaces for efficient fluid flow.

Product Overview

Industrial Chemical Transport Piping

These industrial-grade pipes are specifically engineered for the safe and reliable transport of chemicals and various fluids in demanding industrial environments. Constructed from highly durable, chemically resistant materials, they feature a smooth inner surface designed to minimize friction and pressure drop, ensuring optimal fluid flow efficiency. Built to comply with recognized industry standards, these pipes offer seamless compatibility and ease of integration into existing infrastructure.

Standards & Compliance

Industry Standards	DIN 8077, DIN 8078
--------------------	--------------------

Technical Features

Design Advantages

- Chemically resistant material composition
- Smooth inner surface for reduced friction
- Optimized for minimal pressure drop
- Designed for industrial fluid transport

Color	Green
