

Industrial Cleaning System Component

This metallic component is designed for industrial cleaning systems. It features a hopper and lever mechanism, likely used for dispensing liquids or small solid particles.

Overview

Industrial Cleaning System Component

This industrial-grade component is designed as a specialized attachment for larger cleaning systems. Featuring a durable metallic construction, it incorporates a hopper-like structure and a precise lever mechanism to facilitate controlled dispensing. It is engineered to handle liquids or small solid particles, making it a versatile addition for professional cleaning applications.

Technical Specifications

Key Design Features

- Hopper-style feed structure
- Durable metallic housing
- Integrated lever control

Construction Material	Industrial-grade metal
Application Compatibility	Liquid Dispensing, Particle Application, Industrial Cleaning
Operational Mechanism	Manual lever-actuated dispensing
