

Industrial Climate Control Unit

This industrial climate control unit is a self-contained system designed for climate control in commercial and industrial spaces. It features a louvered top section for air intake or exhaust, ventilation grilles, and connections for refrigerant lines.

Product Overview

Industrial Climate Control System

This industrial-grade refrigeration and ventilation unit is engineered for reliable climate control in demanding commercial and industrial environments. Featuring a self-contained, durable white metal cabinet, the system integrates air management and cooling components into a single, compact housing. The unit is optimized for vapor-compression cycles, ensuring efficient thermal management for large-scale operations.

Technical Specifications

Connection Points

- Refrigerant line inputs
- Refrigerant line outputs

Cooling Technology

Vapor-compression refrigeration cycle

Key Design Features

Louvered air intake, Ventilation grilles, Integrated compressor housing, White metal cabinet
