

Industrial CO2/MAG Welding Machine

Industrial CO2/MAG welding machine designed for heavy-duty metallic processing. Features include adjustable voltage and current settings, a wire feeder unit, and a robust wheeled chassis for mobility.

Overview

Heavy-Duty Industrial Welding Solution

This industrial CO2/MAG welding machine is engineered for demanding metallic processing environments, including manufacturing and construction sectors. It features a robust, wheeled chassis for enhanced mobility on the shop floor and includes an integrated wire feeder unit. With adjustable voltage and current settings, this unit offers the precision and reliability required for professional-grade welding applications.

Technical Specifications

Welding Process	CO2, MAG
Model Identifier	FKR500

Performance Metrics

Power Performance

500 A

Rated Output Current

Design & Features

Mobility

Wheeled Chassis • Portable

Included Components

- Wire feeder unit
- Power source
- Wheeled chassis
