

Industrial Coating and Spreading System

This industrial spraying system is designed for coating and spreading applications. It features a large enclosure with transparent curtains and an electrical control panel for automated or semi-automated operation.

System Overview

Industrial Coating and Spreading System

This industrial-grade coating and spreading system is designed to provide high-precision application within controlled environments. Featuring an integrated electrical control panel for automated operations, the equipment ensures consistent performance for demanding industrial tasks. The inclusion of a containment enclosure with transparent curtains enhances safety and operational cleanliness by effectively managing spray and particulate matter.

Technical Specifications

Primary Applications

- Industrial Coating
- Surface Spreading
- Spray Containment

Control System	Automated Electrical Control Panel
Enclosure Features	Protective Curtains, Containment Enclosure, Transparent Shielding
