

Industrial Coating and Spreading System

This large-scale machinery is designed for industrial coating and spreading applications. It features a complex network of frameworks, platforms, and piping systems.

Product Overview

Industrial Coating and Spreading System

This industrial-grade coating and spreading system is engineered for large-scale manufacturing and processing environments. Featuring a modular blue steel framework and high-capacity piping infrastructure, it provides a robust platform for complex coating applications. The multi-level design facilitates efficient material handling and uniform application across panel structures.

Technical Specifications

Core Components

- Blue steel structural framework
- Multi-level processing platforms
- Integrated piping distribution system
- White panel support arrays

Build Standard

Heavy-duty Industrial • Modular Configuration

Primary Application

Industrial Coating, Material Spreading, Manufacturing
