

Industrial Compressed Air Filtration System

High-efficiency filtration system designed for industrial applications. It effectively removes particulate matter, oil, and water from compressed air lines, ensuring optimal performance and longevity of pneumatic equipment.

Product Overview

Industrial Compressed Air Filtration

This high-efficiency filtration system is engineered for demanding industrial environments to ensure the delivery of clean, dry compressed air. By effectively removing particulate matter, oil, and water, it significantly enhances the performance and extends the lifespan of your pneumatic equipment. Featuring a robust, modular design and built-in monitoring, it provides a reliable solution for manufacturing, automotive, and other heavy-duty applications.

Key Features

System Capabilities

- Particulate matter removal
- Oil mist and moisture extraction
- Modular design for ease of maintenance
- Integrated differential pressure monitoring
- Durable heavy-duty housing

Technical Specifications

Series Models

Series	Model
DR	DP-0020
DR	DP-0102
DR	DP-0140
DR	DP-0160

Industry Applications

Suitable Industries

Manufacturing, Automotive, Pneumatic Systems, Industrial Processing

Compliance & Quality

Series Name

WATERGUARD
