

Industrial Compressor Component

This component is designed for use in industrial compressor systems. It features a cylindrical black body with a brass-colored flanged port, likely for gas or liquid flow.

Product Overview

Industrial Compressor Component Overview

This industrial compressor component is engineered for demanding refrigeration and ventilation systems. Its robust cylindrical design features a precision-machined brass-colored top flange with an integrated flow port, ensuring secure connections for gas or liquid circulation. Built for reliability, this component is held together by high-grade industrial screws, making it an essential part of a high-performance compressor assembly.

Technical Details

Design Specifications

- Cylindrical black body housing
- Brass-colored reinforced top flange
- Angled flow port configuration
- Multi-screw secure fastening system

Application Compatibility

Industrial Machinery • Compressor Systems • HVAC-R

Component Category

Compressor Part, Refrigeration, Ventilation
