

Industrial Conveyor Belt System

This conveyor belt system is engineered for efficient material transportation in industrial settings. It incorporates covered sections and a robust support structure suitable for large-scale applications.

Product Overview

Industrial Conveyor Belt System

This industrial conveyor belt system is engineered for reliable, long-distance material transport across complex site layouts. Featuring a robust steel support structure, it is designed to span significant distances, including over buildings and roads, while protecting conveyed materials from external environmental factors through its covered design. The system integrates seamless transfer points for efficient loading and unloading, making it an ideal solution for large-scale industrial operations.

Technical Specifications

Bridge Span	28 m
Construction Materials	Steel Structure, Covered Enclosure

Operational Capabilities

Application Suitability

Large-scale Industrial • Long-distance Transport • Outdoor Ready

System Features

- Interconnected belt series
- Weather-protected covered sections
- Elevated bridge support structure
- Integrated material transfer points
