

Industrial Conveyor Chain

This chain is designed for power transmission and conveying applications. It is constructed from high-strength steel for durability and features a roller design for smooth operation.

Product Overview

Industrial Conveyor Chain Overview

This precision-engineered industrial conveyor chain is designed specifically for demanding power transmission and conveying applications. Constructed from high-strength steel components, it ensures exceptional durability and reliable performance in heavy-duty industrial environments. The integrated roller design facilitates smooth operation while significantly reducing friction, delivering consistent efficiency across various machinery and conveyor systems.

Technical Specifications

Suitable Applications

- Power transmission
- Conveying systems
- Industrial machinery

Material	High-strength steel
Key Features	Roller design, Reduced friction, High-strength steel, Precision engineered
