

Industrial Crushing and Culling Machine

This industrial crushing and culling machine efficiently processes and separates materials. It features a stainless steel construction with a hopper, cylindrical processing chamber, control panel, and ventilation system.

Overview

Industrial Processing Solution

This industrial crushing and culling machine is engineered for high-efficiency material processing and separation. Constructed with a robust stainless steel frame, the unit features an integrated hopper for material input, a cylindrical processing chamber, and a specialized output system. Designed for demanding industrial environments, it includes a powerful blower-assisted ventilation system to ensure operational safety and material integrity.

Construction & Design

Key Components

- Material Input Hopper
- Cylindrical Processing Chamber
- Control Panel
- Ventilation Blower System
- Material Output Container

Material Composition

Stainless Steel

Safety & Compliance

Operational Safety Guidelines

Guideline Category	Requirement
Training	Operators must be trained; two-person operation (one operator, one monitor) required.
PPE	Must wear protective labor equipment; use gas masks/respirators if leakage occurs.
Material Handling	Containers must be sealed; materials must meet safety/hygiene standards.
Maintenance	Regular inspections required; stop and clean equipment before changing raw materials.
