

Industrial Cutting and Shaping Machine for Garments and Accessories

This heavy-duty industrial machine is designed for garment, shoe, and accessory manufacturing. It is ideal for cutting, shaping, and preparing materials for apparel and accessory manufacturing.

Overview

Industrial Precision Cutting and Shaping

This heavy-duty industrial machine is engineered specifically for the rigorous demands of garment, shoe, and accessory manufacturing. Featuring a robust frame and a high-precision cutting mechanism, it ensures consistent accuracy across various material thicknesses. Equipped with a powerful motor and integrated safety features, this equipment is designed to optimize efficiency and reliability in high-volume production environments.

Technical Specifications

Operational Capabilities

- Precision Cutting
- Material Shaping
- Adjustable Material Thickness Settings

Primary Application

Garment Manufacturing, Shoe Production, Accessory Manufacturing

Performance Features

Performance Highlights

1 High-Duty

Motor Power

Safety Features

Integrated Safety System • Industrial Grade
