

Industrial Cylinder

This cylinder is used in pneumatic systems to provide mechanical motion. It uses pressurized gas to facilitate force.

Product Overview

Industrial Cylinder Overview

This industrial cylinder is designed for heavy-duty applications in pneumatic and hydraulic systems. Constructed from high-grade metallic materials, it ensures durability and consistent performance under operational stress. Its precision-threaded design allows for seamless integration into complex machinery, making it an essential component for industrial automation and mechanical assemblies.

Technical Specifications

Key Design Features

- Metallic construction
- Threaded interface
- High-durability design

Component Type	Industrial Cylinder
Application Suitability	Pneumatic Systems, Hydraulic Systems, Industrial Machinery
