

Industrial Cylinder Component

This cylinder-shaped industrial component is suited for machinery assembly. It features a metallic body with a cylindrical shape, mounted on a stable base and capped with a removable lid.

Product Overview

Industrial Cylinder Component

This robust industrial cylinder is designed for demanding fluid or gas handling applications. Constructed from durable, high-grade metallic materials, it features a stable base with integrated support legs for reliable mounting in machinery assemblies. The design includes precision ports and connectors, ensuring seamless integration into complex industrial systems.

Physical Properties

Material Composition	Stainless Steel or similar durable alloy
Key Design Features	Cylindrical Body, Removable Top Lid, Multi-port Connectivity, Stable Base Support

Technical Specifications

Primary Application

Pressure Vessel • Fluid Handling • Industrial Machinery

Connectivity

- Side-mounted ports
- Base-mounted connectors
- Fluid/Gas compatible
