

Industrial Cylinder Screening Machine

This cylinder screen is designed for efficient material separation and processing. It effectively sorts materials based on size and shape with its rotating cylinder.

Product Overview

Industrial Cylinder Screening Machine

This robust industrial cylinder screening machine is engineered for high-efficiency material separation and processing. It utilizes a large rotating cylinder mechanism to sort materials precisely based on size and shape. Designed for durability and consistent operation, this unit features a powerful motor and enclosed panels to ensure both operational safety and effective dust control.

Design & Build

Maintenance Profile

Easy Maintenance • Customizable

Key Features

Modular Design, Dust Control System, Safety Enclosures, Industrial Grade

Performance

Primary Function

Material separation and sizing

Operation

Rotating cylinder mechanism
