

Industrial Desalination System

This industrial desalination system is engineered for effective water purification. It utilizes a multi-stage filtration process and incorporates monitoring and control components.

System Overview

Industrial Desalination System

This industrial desalination system is engineered for high-efficiency water purification. It utilizes a multi-stage filtration process that integrates large vertical pre-treatment tanks with advanced membrane filtration units. Built with durable stainless steel components, the system is designed to maintain hygiene and longevity in demanding industrial environments.

Construction Material

Stainless Steel

Technical Features

Filtration Process

- Multi-stage filtration
- Vertical pre-treatment
- Membrane filtration

Monitoring & Control

Pressure Gauges, Flow Meters, Control Panel

Application

Ideal Applications

Industrial Water Purification • High-Quality Water Requirements
