

Industrial Desalination System for Water Purification

This desalination equipment is designed to meet specific customer requirements. It effectively removes salts, heavy metals, and harmful organic compounds from water.

Overview

Industrial Desalination System

The KC-SW Series desalination system is engineered to provide reliable water purification for demanding industrial applications. By effectively removing salts, heavy metals, bacteria, and organic compounds, this equipment transforms seawater into water that meets national drinking standards. Built with a durable stainless steel rack, the system is designed to resist rust and corrosion, ensuring long-term stability and secure operation in harsh environments.

Technical Features

Frame Material	Stainless Steel
Corrosion Resistance	Yes
Contaminants Removed	Salts, Heavy Metals, Organic Compounds, Bacteria, Germs

Compliance & Standards

Output Quality
National Drinking Water Standard

Operational Details

Design Flexibility	Customizable based on customer requirements
