

Industrial Diesel Engine R6105C8

The R6105C8 is a robust diesel engine designed for a variety of industrial applications. This engine features a water-cooled system for efficient thermal management, ensuring reliable performance under demanding conditions.

Overview

Industrial Diesel Engine R6105C8

The R6105C8 is a robust diesel engine engineered for demanding industrial applications requiring consistent and dependable power. Featuring a water-cooled design, this inline engine utilizes a direct injection system and a turbocharger to optimize fuel efficiency and output. Built for longevity, it incorporates a heavy-duty crankshaft and connecting rods to ensure high durability and extended service life.

Technical Specifications

Cooling System	Water-cooled
Engine Configuration	Inline
Fuel System	Direct Injection

Performance Features

Primary Components

- Turbocharger
- High-pressure fuel pump
- Precision injectors
- Heavy-duty crankshaft
- Reinforced connecting rods

Compliance

Emission Standards

Stringent Emission Compliant
