

# Industrial Diesel Engine R6105ZLQ

The R6105ZLQ is a robust diesel engine designed for a variety of industrial applications. This engine features a water-cooled system for efficient thermal management and extended lifespan.

## Overview

### Industrial Diesel Engine R6105ZLQ

The R6105ZLQ is a robust diesel engine specifically engineered for high-demand industrial applications, including generator sets, construction equipment, and agricultural machinery. It features a sophisticated water-cooled system and high-pressure fuel injection technology to optimize combustion efficiency while reducing emissions. Designed for long-term reliability, the unit incorporates heavy-duty internal components and a modular architecture that simplifies maintenance tasks.

## Technical Specifications

### Engine Components

- Durable crankshaft
- High-capacity oil pump
- Gear-driven water pump
- Reinforced connecting rods

<b>Cooling System</b>	Water-cooled
<b>Fuel Injection</b>	High-pressure fuel injection system

## Applications & Maintenance

### Maintenance Design

Accessible service points • Modular component design

<b>Compatible Applications</b>	Generator Sets, Construction Equipment, Agricultural Machinery
