

Industrial Double-Shaft Shredder

This industrial double-shaft shredder features robust construction for processing various materials, including plastics, rubber, wood, and metal. It is equipped with high-torque motors and hardened steel cutting blades for efficient and reliable shredding.

Overview

Industrial Double-Shaft Shredder

This heavy-duty double-shaft shredder is engineered for demanding industrial applications, providing robust performance for size reduction and material recovery. Equipped with high-torque motors and hardened steel cutting blades, it ensures efficient processing of diverse materials including plastics, rubber, wood, and metal. The system is designed for reliability and can be customized to meet specific operational requirements.

Key Features

Core Components

- High-torque motors
- Hardened steel cutting blades
- Heavy-duty double-shaft mechanism

Primary Applications

Waste Recycling • Size Reduction • Material Recovery

Suitable Materials

Plastics, Rubber, Wood, Metal

Operational Capabilities

Customization

Yes
