

Industrial Dual-Head Spreading and Spraying Machine

This machine is designed for spreading and spraying applications. It features dual rotating heads with multiple arms, a control panel, and an adjustable base for precise and uniform material distribution.

Overview

Industrial Dual-Head Precision Spreading and Spraying

This industrial-grade machine is engineered for high-precision material distribution, featuring a sophisticated dual-head design for maximum throughput. Each head incorporates multiple rotating arms to ensure uniform coverage across all application surfaces. Built on a heavy-duty, stable base with adjustable supports, this equipment is the ideal solution for demanding industrial environments requiring consistent performance.

Technical Specifications

Stability System

- Stable heavy-duty base
- Adjustable support legs

Head Configuration

Dual rotating heads

Design Features

Multi-arm distribution, Adjustable supports, Industrial construction

Control Interface

Yes
