

Industrial Enclosure Ventilation Filter Fan Unit

This ventilation filter fan unit is designed for industrial enclosures. It maintains a clean and cool environment inside electrical cabinets and other industrial equipment housings by filtering dust and circulating air.

Product Overview

Industrial Enclosure Ventilation

This industrial enclosure ventilation filter fan unit is engineered to maintain optimal operating temperatures and air quality within electrical cabinets and equipment housings. Featuring a robust louvered filter cover and an integrated cooling fan, the unit effectively dissipates heat while preventing the ingress of dust and airborne contaminants. The protective grill design ensures safety and durability, making it an essential component for protecting sensitive industrial electronics.

Technical Specifications

Design Features

- Louvered filter cover
- Integrated cooling fan
- Protective grill
- Dust and particle filtration

Protection Capabilities

Dust-proof • Water-resistant design

Primary Functions

Heat Dissipation, Air Filtration, Contaminant Prevention, Enclosure Cooling
