

Industrial Evaporative Air Cooler

This evaporative air cooler is designed for industrial and commercial use, providing efficient cooling through water evaporation. It features a durable housing, adjustable settings, and a large water tank for extended operation.

Overview

Industrial Evaporative Air Cooler

This industrial evaporative air cooler is designed for high-efficiency cooling in demanding commercial and industrial environments. Utilizing advanced evaporative cooling technology, it effectively lowers ambient temperatures while maintaining robust performance. The unit features a durable, corrosion-resistant housing and adjustable settings, ensuring reliable operation and customized cooling for your specific space requirements.

Key Features

Operational Features

- Adjustable fan speed
- Adjustable water flow
- Large capacity water tank
- Easy-access maintenance components

Cooling Technology

Evaporative Cooling

Construction

Corrosion-resistant, Durable Housing, Louvered Panels

Performance

Performance Highlights

1 Evaporative

Cooling Principle
