

Industrial Evaporative Air Cooler

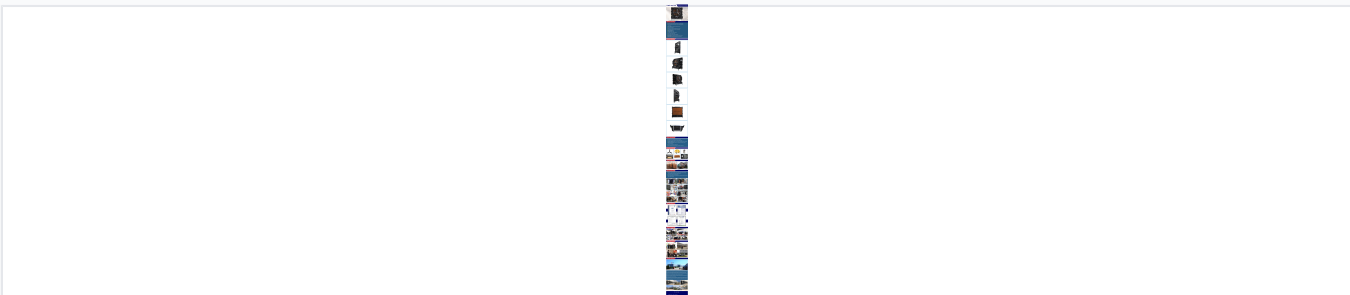

This evaporative air cooler is designed for industrial and commercial environments. It utilizes water evaporation to lower air temperature, providing an energy-efficient alternative to traditional air conditioning.

Product Overview

High-performance air cooler featuring a durable molded housing and advanced control panel.

High-Performance Industrial Cooling

This industrial evaporative air cooler is engineered for durability and efficiency in demanding environments like factories, warehouses, and workshops. It features a robust, one-piece molded polyethylene housing and a powerful variable speed motor, providing a cost-effective alternative to traditional air conditioning. Designed for ease of use, the unit is portable with heavy-duty casters and requires no complex installation—simply connect water and electricity to begin operation.

Technical Specifications

Power Consumption

0.6 KWh

Hourly Consumption

| | |
|-------------------------|----------------------|
| Voltage Range | 110-230V |
| Fresh Air Output | 21580 m³/h |
| Variable Speed | 0-100% (0-180 range) |

Features & Controls

Operation Modes

- Normal
- Sleep
- Breeze

Control Modes

Speed Controlled, Temperature Controlled, Time Controlled

Control Interface

Micro-computer programmed control with LED panel

Construction & Design

Mobility

Swivel Casters • Portable • No Installation Required

Housing Material

One-piece molded polyethylene

Application Areas

Suitable Industries

Industry Type

Injection Molding

Printing

Shoe-making

Food Processing

Rubber

Clothing

Electronics
