

Industrial Evaporative Air Cooler for Large Spaces

This evaporative air cooler is designed for industrial and commercial applications such as factories and supermarkets. It provides efficient cooling through water evaporation, reducing energy consumption compared to traditional air conditioning systems.

Product Overview

High-Efficiency Cooling for Large Spaces

This industrial evaporative air cooler is engineered to provide effective climate control for large-scale environments like factories, schools, and supermarkets. By utilizing advanced water evaporation technology, the unit offers a highly energy-efficient alternative to traditional air conditioning systems. Its robust construction ensures long-lasting durability, while the high-volume airflow and adjustable louvers guarantee optimal air distribution throughout the workspace.

Key Features

Operational Benefits

- Energy-efficient cooling via water evaporation
- High-volume airflow capacity
- Durable, industrial-grade construction
- Adjustable louvers for precise air distribution
- Large capacity water tank for extended operation

Suitable Applications

Factories, Schools, Supermarkets, Commercial Spaces, Industrial Facilities

Series Model KS

Maintenance & Care

Maintenance Guidelines

- Regular cleaning of the unit
- Periodic water level checks
- Routine inspection for optimal longevity
