

Industrial Filtration System with Pressure Gauge

This robust filtration system is designed for industrial applications requiring particulate removal from liquids. It features a cylindrical housing, pressure gauge, pump, and various valves, all mounted on a sturdy frame.

Overview

Industrial Filtration System

The QH Series is a robust filtration system engineered for demanding industrial environments. Designed for efficiency and reliability, it features an integrated pressure gauge for real-time performance monitoring. Built on a sturdy frame, this system is ideal for removing particulate matter from liquids in chemical processing and water treatment applications.

Technical Specifications

Series	QH Series
Monitoring	Pressure Gauge, Flow Control Valves
Construction	Cylindrical housing on sturdy frame

Applications

Common Applications

- Chemical Processing
- Water Treatment
- Industrial Fluid Filtration
