

Industrial Flaking Mill

Industrial flaking mill designed for efficient material processing. The robust machinery is suitable for applications requiring precise flaking and milling operations.

Overview

Industrial Flaking Mill

The Industrial Flaking Mill is a specialized piece of equipment designed to shave wood chips into flakes within a precise thickness range. It is engineered for versatility, supporting the production of ordinary particle boards as well as high-performance materials like super-strength particle boards (SSPB) and oriented strand boards (OSB). Built for industrial environments, this robust machinery ensures consistent performance and reliability for demanding material processing tasks.

Applications

Primary Applications

Particle Board Production, SSPB Preparation, OSB Preparation, Wood Chip Flaking

Technical Specifications

Operational Capabilities

- Adjustable milling parameters
- High throughput capacity
- Compatible with various wood material types
- Precise thickness control
