

# Industrial Flanged Check Valve for Backflow Prevention

This check valve is designed to prevent backflow in pipelines. Its robust construction includes flanged connections for secure installation across a variety of fluids and operating conditions.

## Product Overview

### Industrial Backflow Prevention

This industrial flanged check valve is engineered specifically for reliable backflow prevention in demanding pipeline environments. Featuring a robust, durable body construction, it is designed to withstand high-pressure and high-temperature operating conditions. The internal components are optimized to minimize pressure drop while maximizing flow capacity, making it an essential component for water, oil, and gas industrial applications.

## Technical Specifications

Connection Type	Flanged
Suitable Applications	Water Systems, Oil & Gas, Industrial Pipelines

## Performance Features

### Operational Benefits

- High pressure resistance
- High temperature tolerance
- Minimized pressure drop
- Maximized flow capacity

### Build Quality

Robust Construction • Industrial Grade
