

Industrial Flow Control Valve

This industrial flow control valve is designed for precise flow regulation in demanding environments. It features a globe-style valve body with flanged connections, suitable for various fluid types.

Product Overview

High-Performance Flow Control

This Industrial Flow Control Valve is engineered for precise fluid management in demanding industrial environments. Featuring a robust globe-style body and flanged connections, it ensures secure installation and long-term durability. The integrated actuator provides reliable and accurate positioning, making it an ideal solution for maintaining process stability across various fluid types.

Technical Specifications

Nominal Diameter

65 mm
DN

Pressure Rating

16 PN
Nominal Pressure

Design & Construction

Connection Type

Flanged

Valve Body Style

Globe-style

Actuator Type

Robust positioning actuator

Application

Fluid Compatibility

- Various fluid types
- Demanding industrial applications

Key Performance Features

Precise Flow Control, Accurate Positioning, Process Stability, Reliable Performance
