

Industrial Flow Control Valve with Lever

This valve is designed for a variety of industrial applications. It features a durable construction with a black finish, offering longevity and resistance to corrosion.

Overview

Industrial Flow Control Valve

This robust and versatile industrial flow control valve is engineered to withstand demanding operational environments. Featuring a durable construction with a corrosion-resistant black finish, it ensures long-term reliability and performance. The integrated lever mechanism allows for precise flow regulation and adjustment, while the threaded connections facilitate seamless installation into existing industrial piping systems.

Technical Specifications

Control Type	Lever-operated
Connection Interface	Threaded
Surface Finish	Black, corrosion-resistant

Key Features

Performance Attributes

Durable Construction • Corrosion Resistant • Precise Adjustment

Application Suitability	Industrial Flow Regulation, System Integration, Demanding Environments
