

Industrial Flow Meter for Liquids and Gases

This flow meter is designed for precise measurement of liquid and gas flow rates. Its robust construction includes flanged connections and analog displays for monitoring flow parameters.

Overview

Precision Industrial Flow Measurement

This industrial flow meter is engineered for high-accuracy monitoring of both liquid and gas flow rates in demanding environments. Featuring a robust, durable construction with secure flanged connections, it ensures reliable performance and easy installation in complex piping systems. The unit is equipped with multiple analog displays, allowing for immediate, clear local reading of critical flow parameters, making it an essential tool for precise flow control.

Technical Specifications

Compatible Media	Liquids, Gases
Connection Type	Flanged
Display Interface	Analog
Model Identifier	0410005

Key Features

Primary Advantages

- Robust industrial-grade construction
- Secure flanged installation
- Dual-medium capability (Liquid/Gas)
- Real-time analog local monitoring
