

Industrial Fluid and Gas Control System with Pressure Regulation

This industrial system regulates fluid and gas flow. It features brass fittings, pipes, and a blue valve within a metal enclosure.

Overview

Industrial Fluid and Gas Control System

This industrial control system is engineered for precise fluid and gas management, featuring integrated pressure regulation capabilities. Housed within a robust metal enclosure, the assembly utilizes high-quality brass fittings and durable piping to ensure reliable distribution and flow control. It is designed for demanding industrial environments where consistent performance and safety are paramount.

Technical Specifications

Key Features

- Integrated pressure regulation
- Fluid and gas compatibility
- Internal component accessibility
- Secure metal housing

Application Suitability

Fluid Control • Gas Distribution • Pressure Regulation

Construction Materials

Brass Fittings, Metal Enclosure, Industrial Grade Piping

Mounting Configuration

Base-mounted assembly
