

Industrial Fluid Centrifugal Pump

This centrifugal pump is designed for controlling fluid flow. It has a flanged connection for secure installation in industrial applications requiring on/off control of liquids.

Product Overview

Industrial Fluid Management

This industrial gate valve is engineered for precise fluid flow control in demanding pipeline environments. Built with robust materials and featuring a secure flanged connection, it ensures reliable on/off operation for a variety of liquid-handling applications. Its durable construction is designed to withstand rigorous industrial conditions, making it an essential component for system maintenance and flow regulation.

Design & Construction

Valve Type

Gate Valve

Connection Type

Flanged

Primary Application

Fluid Control, Pipeline Management, Industrial
