

Industrial Fluid Control Valve

This industrial valve is designed to control the flow of fluids or gases in demanding applications. It features circular access ports and a robust construction for reliable performance.

Product Overview

Industrial Fluid Control Valve

This industrial fluid control valve is engineered for heavy-duty applications, providing reliable regulation of fluid and gas flow. Its robust construction ensures durability in demanding environments, making it an essential component for industrial infrastructure. The design features large circular access ports for efficient throughput and easy integration into existing pipeline systems.

Technical Specifications

Design Features

- Large circular access ports
- High-visibility green finish
- Reinforced internal structure

Finish

Industrial Green

Application

Heavy-duty, Industrial, Fluid Control, Gas Control
