

Industrial Fluid Control Valve

This valve is designed for robust performance in industrial fluid control. Its complex assembly includes flanges, actuators and connection points for demanding environments.

Product Overview

Industrial Fluid Control Valve

This robust industrial fluid control valve is engineered for demanding environments where precise flow regulation of liquids and gases is critical. Featuring a sturdy construction with a durable blue painted finish, the assembly integrates high-quality flanges and actuators to ensure reliable performance. It is designed to withstand rigorous operational conditions, making it an essential component for complex industrial piping systems.

Technical Specifications

Application Suitability

- Fluid flow control
- Gas flow regulation
- Demanding industrial environments

Valve Type	Industrial Control Valve
Finish	Blue industrial paint
Key Features	Robust Construction, Integrated Actuator, Flanged Connections, Industrial Grade
