

Industrial Fluid Control Valve

This valve is designed for high-pressure fluid control in heavy machinery applications. It features a robust construction with multiple access ports and reinforced mounting points.

Product Overview

Industrial Fluid Control Valve

This industrial fluid control valve is engineered for high-pressure fluid management within heavy machinery applications. Featuring a robust, segmented construction, it is designed to withstand demanding industrial environments while ensuring precise flow regulation. With multiple access ports and reinforced mounting points, this valve is built for secure installation and long-term durability.

Technical Specifications

Installation Features

- Reinforced mounting points
- Secure installation design
- Easy maintenance access

Design Focus

Durability • Precision Engineering

Construction

Segmented housing with multiple access ports

Primary Applications

High-pressure systems, Heavy machinery, Industrial fluid control
