

Industrial Fluid Filtration Unit

This filtration unit is designed for industrial fluid processing. It features a durable metal housing with ports and mounting points for integration into larger systems.

Product Overview

Industrial Fluid Filtration Performance

This industrial fluid filtration unit is engineered for robust performance in demanding machinery environments. Featuring a durable metal housing with a specialized mounting flange and integrated ports, it is designed for seamless integration into larger industrial water or oil processing systems. Its design prioritizes accessibility for maintenance tasks, such as filter element replacement and fluid drainage, ensuring reliable operation in heavy-duty applications.

Technical Specifications

Maintenance Access

- Hexagonal maintenance bolt
- Drainage port
- Replaceable filter element housing

Housing Material	Industrial-grade metal
Mounting Interface	Circular flange with radial supports

Compliance and Usage

Category

Other General Machinery

Industry Application	Industrial Machinery, Fluid Processing, Water Filtration, Oil Processing
