

# Industrial Fluid System Dry Filter

This filter features an automatic compression device and effectively removes molecular wear and tear. It can dissolve water and acid contaminants, and its mat movement will not cause vibration.

## Overview

### Industrial Liquid Line Protection

The SEK series filter drier is a critical component designed to maintain the integrity of cooling and fluid systems. By utilizing a specialized dry filter mix, it effectively prevents moisture, soluble substances, and particulates from entering the system. This ensures optimal operating conditions and extends the overall longevity of industrial machinery.

## Technical Identification

Model Series	SEK Series
Available Models	SEK-083, SEK-083S

## Performance

### Primary Function

- Moisture removal
- Contaminant filtration
- System integrity maintenance
- Prevention of water damage

## Application

### System Compatibility

Liquid Line • Cooling Systems • General Machinery • Industrial Fluid Systems

Operating Medium	Liquid
------------------	--------

## Construction

### Design Features

- Dry filter mix design
- Robust construction
- Reliable filtration media
