

Industrial Fluid Transfer Centrifugal Pump

This centrifugal pump is engineered for effective fluid transfer in diverse industrial applications. Its compact design facilitates straightforward installation, and it is well-suited for handling clean or mildly contaminated fluids with minimal viscosity.

Overview

Industrial Fluid Transfer Centrifugal Pump

This close-coupled centrifugal pump is engineered for efficient fluid transfer across diverse industrial applications. Featuring a robust motor, it delivers reliable performance while maintaining a compact footprint for streamlined installation. The unit is constructed with durable, corrosion-resistant materials, making it an ideal solution for handling clean or slightly contaminated fluids with low viscosity.

Technical Specifications

Pump Type	Close-coupled centrifugal pump
Application Suitability	Clean fluids, Slightly contaminated fluids, Low viscosity fluids

Performance Features

Key Design Benefits

- Robust motor for reliability
- Compact design for easy installation
- Corrosion-resistant construction
- High durability
