

Industrial Forming Mould

This is a white, circular mould used in industrial processes. It features a multi-tiered design with a segmented outer edge, likely made of plastic or composite material.

Product Overview

Industrial Forming Mould

This industrial forming mould is engineered for precision manufacturing applications. Featuring a sophisticated multi-tiered circular design, it facilitates consistent shaping processes. Constructed from high-quality composite materials, it offers durability and reliability for demanding production environments.

Physical Characteristics

Color

White

Shape

Circular

Design Features

Multi-tiered, Central raised area, Segmented outer edge

Material Composition

Industrial-grade plastic/composite
