

Industrial Gas Facility Construction Project

This service provides construction for industrial gas facilities. It includes building efficient storage and distribution systems for gases like oxygen.

Project Overview

Industrial Gas Facility Construction

This industrial gas facility construction project delivers a comprehensive solution for oxygen production and storage. Designed for efficiency and scale, the facility integrates advanced infrastructure, including specialized cylindrical storage structures and large-scale distribution capabilities. This project is engineered to meet the rigorous demands of industrial gas operations, ensuring reliable output and safe storage.

Facility Type

Oxygen Production and Storage Plant

Technical Metrics

Production Capacity

200 m3/h

Oxygen Output

Infrastructure

Storage Infrastructure

- Cylindrical storage tanks
- High-pressure gas cylinders
- Bulk distribution infrastructure

Compliance & Standards

Industrial Safety, Gas Storage Standards, Infrastructure Compliance
