

Industrial Gate Valve for Fluid Control

This industrial gate valve controls the flow of fluids or gases in piping systems. It features a circular opening with internal support structures.

Product Overview

Industrial Fluid Control Solution

This industrial gate valve is engineered for robust fluid control in demanding pipeline environments. Featuring a durable construction with internal support structures, it provides reliable flow regulation for both liquids and gases. Its design ensures seamless integration into larger industrial piping systems, making it an essential component for infrastructure maintenance and operational efficiency.

Technical Specifications

Design Features

- Circular opening design
- Internal support structures
- High-durability paint finish
- Integrated mounting support

Visual Identification

Green Valve Body • Blue Support Base

Valve Type	Gate Valve
Suitable For	Fluid Control, Gas Control, Industrial Piping
