

Industrial Gate Valve for Fluid Control

This gate valve is designed for controlling fluid flow in industrial settings. It features flanged connections for secure installation and a handwheel actuator for manual operation.

Product Overview

Industrial Gate Valve

This industrial gate valve is engineered for precise fluid flow control in demanding environments. Featuring a robust construction with a durable blue painted finish, it ensures long-term reliability for on/off control of liquids and gases. The design incorporates flanged connections for secure, leak-resistant installation, making it an ideal choice for various industrial piping systems.

Technical Specifications

Operation	Manual
Actuator	Handwheel
Connection Type	Flanged
Suitable Applications	Liquid Control, Gas Control, Industrial Piping

Design & Build

Surface Finish	Blue Painted
Construction	Robust Industrial Grade
