

# Industrial Gate Valve for Fluid Control

This gate valve is designed for controlling fluid flow in pipelines. It features a durable construction with a flanged connection and manual handwheel for precise operation.

## Overview

### Industrial Fluid Control Solution

This industrial gate valve is engineered for reliable fluid control within pipeline systems. Featuring a robust, durable construction, it is designed for longevity and superior resistance to corrosion in demanding environments. The unit utilizes a standard flanged connection for secure and efficient installation, ensuring dependable shut-off functionality for various industrial applications.

## Technical Specifications

Operation Method	Manual (Handwheel)
Connection Type	Flanged
Suitable Applications	Pipeline Systems, Fluid Control, Industrial Shut-off

## Design Features

### Finish

Blue

### Key Benefits

- Corrosion resistant materials
- Robust construction
- Precise gate positioning control
