

Industrial Gate Valve for Fluid Control

This gate valve is designed to control fluid flow in pipelines. It features robust construction, a circular opening, and a handwheel for manual operation.

Overview

Industrial Gate Valve Overview

This industrial gate valve is engineered for precise fluid control in demanding pipeline environments. Featuring a robust, durable metal construction, it is designed for reliable on/off operation of both liquids and gases. The unit includes a manual handwheel for intuitive control and flanged connections to ensure straightforward installation and maintenance within existing piping systems.

Technical Specifications

Primary Function

On/Off Control • Fluid Flow Regulation

Operation Type	Manual (Handwheel)
Connection Type	Flanged
Suitable Media	Liquids, Gases
Body Material	Durable Metal (Cast Iron/Steel)
